I am an engineer, with several years of experience within various areas of product testing. I enjoy automating tests, and in the process, refine the product and its value, always, with the end user in focus. Continuously collaborating with developers, product owners, account managers and testers - to best align with the use-case, while at the same time maintaining a high code coverage , are my strengths.

I will be starting as a Senior Test Consultant with [B3 Consulting Group](#)

In my last job, I worked as a QA Engineer at [Cabonline Technologies AB](#) until November 2020. I worked in the web team, hopping between various ReactJs applications. I developed end to end tests with [Cypress](#), dockerized the test environment and integrated into existing CI Pipelines. I also worked with visual regression tests.

Business point of view, I am familiar with post trade solutions and trading platforms in general(With hands-on knowledge of clearing technology for stock exchanges). I have also briefly worked with IoT sensor networks and for several years in industrial automation.

I am looking for testing roles involving API/Frontend/Backend testing of web-services/products. I am easy to work with, a keen learner, very communicative and thrive working in a team. Recently, I got certified with SAE 5.0. I can communicate in English and Swedish.
