Summary

I am an engineer, with several years of experience within various areas of product testing. I enjoy automating tests, and in the process, refine the product and its value, always, with the end user in focus. Continuously collaborating with developers, product owners, account managers and testers - to best align with the use-case, while at the same time maintaining a high code coverage, are my strengths.

I have been working as a QA Engineer at [Cabonline Technologies AB](#) since May 2019. I work in the web team, hopping between various ReactJs applications. In my day job, I write end to end tests with [Cypress](#), dockerize the test environment and integrate into existing CI Pipelines. I also work with [Storybook](#) & visual component tests using [Loki](#)

I am familiar with post trade solutions and trading platforms in general (With hands-on knowledge of clearing technology for stock exchanges). I have also briefly worked with IoT sensor networks and for several years in industrial automation.

I am looking for testing roles involving UI testing of web/mobile services/products. I am easy to work with, a keen learner, very communicative and thrive working in a team. Recently, I completed a course in Computational Thinking from University Of Pennsylvania. I am very keen to start on projects where I could build my "TestOps" skills by deploying code-less UI tests over Google Kubernetes Engine. I can communicate in English and Swedish.
