I am an engineer, with several years of experience within various areas of product testing. I enjoy automating tests, and in the process, refine the product and its value, always, with the end user in focus. Continuously collaborating with developers, product owners, account managers and testers - to best align with the use-case, while at the same time maintaining a high code coverage , are my strengths.

I have been working as a QA Engineer at Cabonline Technologies AB since May 2019. I work in the web team, hopping between various ReactJs applications. In my day job, I write end to end tests with Cypress, dockerize the test environment and integrate into existing CI Pipelines. I also work with Storybook & visual component tests using Loki Loki

Business point of view, I am familiar with post trade solutions and trading platforms in general(With hands-on knowledge of clearing technology for stock exchanges). I have also briefly worked with IoT sensor networks and for several years in industrial automation.

I am looking for testing roles involving API/Frontend/Backend testing of web-services/products. I am easy to work with, a keen learner, very communicative and thrive working in a team. Recently, I completed a course in Computational Thinking from University Of Pennsylvania. I can communicate in English and Swedish.
